No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-09-949-016-56450/c

Sequence 56450, Application US/09949016

Patent No. 691239

GENERAL INFORMATION:
PAPLICANT: UPENTER, J. Craig et al.
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;
TITLE OF INVENTION NUMBER: US/09/949,016

CURRENT PELING DATE: 2000-04-14

PRIOR FILING DATE: 2000-10-20

PRIOR APPLICATION NUMBER: 60/231,768

PRIOR FILING DATE: 2000-10-03

PRIOR PELING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE; PRESEQ FOR WINGOWS VERSION 4.0

SEQ ID NO 56450
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

Pathway. Has deubiquitinating activity that is directed towards non-Lys-48-linked polyubiquitin chains. The inhibition of NF-kappa-B activation is mediated at least in part, by the deubiquitination and inactivation of TRAF2 and, to a lesser extent, TRAF6.

CATALITIC ACTIVITY: Ubiquitin C-terminal thiolester + H(2)O =

## ALIGNMENTS

```
The invention relates to novel genes (ABL89449-ABL90853) and proteins

(ABB89040-ABB90444) useful for preventing, treating or ameliorating

medical conditions e.g. by protein or gene therapy. The genes are

isolated from a range of human tissues disclosed in the specification.

The nucleic acids, proteins, antibodies and (ant) agonists are useful in

the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and

covarian cancer and other cancers of the adrenal gland, bone, bone marrow,

breast, gastrointestinal tract, lung, or urogenital; (b) immune

disorders e.g. Addison's disease, allergies, autoimmune haemolytic

anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,

multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)

cardiovascular disorders such as mycoardial ischaemias; (d) wound healing

cardiovascular diseases e.g. cerebral anoxia and epilepsy; and (f)

infections. Note: The sequence data for this patent did not form part of

the printed specification, but was obtained in electronic format directly

crome with the printed specification, but was obtained in electronic format directly

contains the printed specification of the printed pri

The present invention relates to the isolation of novel human enzyme polypeptides, and the CDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the disorders including hyperproliferative disorders (e.g. cancer), meurological disorders (e.g. AIDS) autoimmune disorders (e.g. anthal).

Immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g. asthma), cardiovascular disorders (e.g. AIDS) inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. altherosclerosis), blood-related disorders (e.g. inflammatory disorders (e.g. infertility) and infertility and also be used in gene therapy. AAU22915-AAU23814 represent the novel human enzyme polypeptides of the invention can also be used in gene therapy. AAU22915-AAU23814 represent the novel human enzyme polypeptides of the invention of a lectronic format directly from WIPO at the print format directly from WIPO at the print sequences.

 The present invention describes primer sets for synthesising 5602 full-

[1 length cDNAs defined in the specification. Where a primer set comprises:
[2 [4] an Oligo-dr primer and an Oligonucleotide comprises one of the 5602
[2 complementary strand of a polynucleotide which comprises one of the 5602
[2 complementary strand of a polynucleotides; or (b) a combination
[2 complementary strand of a polynucleotide which comprises a 5'-end
[2 complementary strand of a polynucleotide which comprises a 5'-end
[2 sequence and an Oligonucleotide comprises a 3'-end sequence complementary to a
[2 complementary strand of a polynucleotide which comprises a 1'-end sequence complementary to a
[2 complementary strand of a polynucleotide which comprises a 1'-end sequence
[3 complementary strand of a polynucleotide sequence
[4 complementary strand of a polynucleotide of the 5'-end sequence
[5 complementary strand of a polynucleotides and the complementary to a
[5 complementary strand of a polynucleotide of the 5'-end sequence
[5 complementary strand of a polynucleotide of the 5'-end sequence
[6 complementary strand of a polynucleotide of the 5'-end sequence
[7 complementary strand of a polynucleotides
[8 comprises at least 15 nucleotides and the compination of the full-length cDNAs. The primers are useful for synthesising polynucleotides,
[8 complementary strand of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs represent human amino acid sequences; and AAH13632 to AAH13632 represent coligonucleotides, all of which are used in the exemplification of the present invention

 The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with noctropic, immunosuppressent and cytostatic activity. The polynucleotides are useful immunosuppressent and cytostatic activity. The polynucleotides are useful on gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous fijuries, peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, changer Syndrome. Other uses include the Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assaays for receptor activity, arthritis and inflammation, leuksemias and sassays for receptor activity, arthritis and inflammation, leuksemias and C.N.S disorders. Note: The sequence data for this patent did not form

 The invention relates to purified proteins and genes encoding them, that are involved in T cell activation (I) and has an amino acid deletion, substitution or addition in the amino acid sequences. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of autoimmune disease (rheumatoid arthritis, asthma, multiple sclerosis and diabetes), allergic disease, infectious disease, AIDS, and acute or chronic rejection at organ transplant or bone marrow transplant. This sequence corresponds to a protein involved in T cell activation.
 d protein involved in T cell activation, useful for preventing and/or treating acquired immunodeficiency utoimmune (e.g. rheumatoid arthritis, and diabetes), allergic

 The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification, where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide comprisementary to the
complementary strand of a polyuncleotide comprises one of the 5602
nucleotide sequences defined in the specification, where the
complementary strand of a polyuncleotide which comprises one of the 5602
complementary strand of a polyuncleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to a
polynucleotide comprises at least 15 nucleotides and the combination of
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence, where the
coligonucleotide comprises at least 15 nucleotides and the combination of
complementary strand of a polynucleotide so the 5'-end sequence of a polynucleotide of
complementary strand of a polynucleotide size and the combination of
complementary strand of a polynucleotide size and sequence where the
coligonucleotide which comprises at least 15 nucleotides and the combination of
colification. The primer sets can be useful for synthesising polynucleotides,
conficularly full-length cDNAs. The primers are also useful for the
chetction and/or diagnosis of the abnormality of the proteins encoded by
the full-length cDNAs. The primers allow obtaining of the full-length
cDNAs easily without any specialised methods. AAH03166 to AAH13628 and
AAH13633 to AAH18742 repersent human cDNA sequences; AAB92446 to AAB95893
represent human amino acid sequences; and ANH3629 to AAH13632 represent
complementary strand of the rempile of the
coligonucleotides, all of which are used in the exemplification of the
 Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length
 detection; diagnosis; antisense therapy; gene therapy.

The present in a patient. The method comparison comparing the level of expression of one or more genes or gene products in a biological sample from the patient with that in a normal patient sample, where a difference in the gene expression in the first sample compared to that in the second sample is a diagnostic of the disease. Also claimed are: method (M2) for distinguishing between normal and disease tissues; method (M3) for distinguishing between normal and disease tissues; method (M3) for monitoring the response of a breast cancer patient to treatment with an anti-cancer agent; method (M4) for identifying a compound for treating comprising two or more probes corresponding to genes selected from ADR99122-ADR991248. In M1 and M2 the genes are selected from ADR99122-ADR991248. In M1 and M2 the genes are selected from ADR99124 and the gene products are polypeptides selected from ADR99124 and the gene products are polypeptides selected from ADR99124 and the gene products are polypeptides selected from ADR99124 and the gene products are polypeptides selected from ADR99124 and the gene products are polypeptides selected from ADR99124 and the gene products are polypeptides selected from ADR99124 and the gene products are polypeptides selected from ADR99124 and the gene products are polypeptides selected from ADR99124 and the gene products are polypeptides selected from ADR99124 and the gene products are polypeptides selected from ADR99124 and its useful for diagnosing became and and disease tissue. M3 is useful for manitoring the response of a breast cancer patient to treatment with an anti-cancer agent. M4 is useful for identifying a compound for treatment with part of the printed specification, but was obtained in electronic form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/bublished_pct_sequences.

Thus invention relates to the movel association of protein sequences (and the genes which encode them) to the NF kappaB pathway. The invention may be useful for the production of compounds with an antiinflammatory, cytostatic, hepatotropic, vincide, antiatrhitic, antisthemmatic, gastrointestinal-den, antiatheritic, antisthemmatic, immunodulator, cerebroprotective, antiatrhitic, antisthemmatic, discussed associated with the NF kappaB pathway. The condition is an useful for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NF kappaB pathway. The condition is an immune disorder, an inflammatory disorder, an inflammatory disorder, an inflammatory disorder, an inflammatory disorder, paper celated to aberrant NF-kappaB regulation, cancer, aberrant apoptosis, hepatic disorders, Hodgkin's lymphomas, haematopoletic tumours, hypor-IgM syndromes, hypohidrotic ectodermal dysplasis, immunediciency, viral infections, HIV-1, HILV-1, hepatitis B, hepatitis C, EBW, influenza, viral replication, host cell survival, evasion of immune responses, rheumatoid arthritis, inflammatory bowel disease, colitis, asthma, atherosclerosis, cacheria, euthyroid sick syndrome, stroke, EAE, autoimmune disorders, disorders related to hypercompenital conditions, birth defects, necrotic lesions, wounds, crypercompenital conditions, birth defects, necrotic lesions, wounds, crypercompenital conditions, birth defects, necrotic lesions, wounds, cryper related to aberrant signal transplant rejection, conditions related to organ transplant conditions in the NP-kappaB pathway of the invention Note This sequence does not appear in the specification but the viruses. The present form the papear in the specification but the viruse of the movel association with the NP-kappaB pathway of the conditions are appear in the specification but appear from conditions.

 The invention relates to methods of identifying compounds that alter on more biological activities of CD40. One method involves screening for molecules that modulate the binding of NF-kappaB essential modulator (NEMO) and CYLD. The methods and compositions of the invention of determining compounds that agonize or antagonize a CD40 signaling activity, are useful for the further definition of CD40-mediated signaling pathways, and for manipulation of CD40-mediated cellular responses. They also provide therapeutic agents for treating disorders the immune system, and inflammatory and cancer diseases. The present

 The invention relates to purified proteins and genes encoding them, that are involved in T cell activation (I) and has an amino acid deletion, substitution or addition in the amino acid sequences. The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of autoimmune disease (rheumatoid arthritis, asthma, multiple sclerosis and diabetes), allergic disease, infections disease, AIDS, and acute or chronic respection at organ transplant or bone marrow transplant. This sequence corresponds to a protein involved in T

The present invention relates to the isolation of novel human enzyme polypeptides, and the CDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. ALDS) autoimmune disorders (e.g. atheritis), neurological disorders (e.g. ALDS) autoimmune disorders (e.g. atheritis), neurological disorders (e.g. ALDS) autoimmune disorders (e.g. atheriar's disorders (e.g. atheriar) and infectious disorders (e.g. atherosclerosis), blood-related disorders (e.g. influence).

Cardiovascular disorders (e.g. atherosclerosis), blood-related disorders (e.g. influence).

Cardiovascular disorders (e.g. influence). The polynuclectides of the invention can also be used in gene therapy. AAU22915-AAU23814 represent the novel human enzyme polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the printed specification, but was obtained in electronic format directly from WIPO at

 AAY91946-61 show human cytoskeleton associated proteins 1 to 16 (CYSKP-1 to CYSKP-16) respectively. The sequences can be used to treat and diagnose cancer and cell proliferative, autoimmune/inflammatory, vesticle trafficking, neurological, cardiovascular, cell motility, reproductive and muscle disorders. Pharmaceutical compositions containing CYSKP-2 to CYSKP-16 can be used to treat or prevent disorders associated with decreased expression or activity of CYSKP (claimed), for example, atherosclerosis, cirrhosis, hepatitis, myelofibrosis, psoriasis, autoimmune/antiinflammatory disorders such as allergies, anemia, asthma, acquired immunodeficiency syndrome (AIDS), Crohn's disease, diabetes mellitus, Goodpasture's syndrome, osteoarthritis, scleroderma and trauma. CYSKP antagonists can be used to treat or prevent a disorder associated with increased expression or activity of CYSKP (claimed)

                          immunosuppressant and cytostatic activity. The polynucleotides are useful immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amycrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, and thrombolytic activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, archer disposses and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form
